Concept Map

1. Research the web to find out more about climate change and forests.
2. Check out examples of concept maps on the web by searching for “climate change concept maps” in your search engine.
3. Use the space below to sketch out your own concept map that shows the relationships between forests and climate change causes, effects, and solutions. Consider the implications for biodiversity, people’s livelihoods, and the economy. Be creative!

4. Combine your ideas with others in your group to create a poster-size concept map to share with other groups.

Career Corner

FOREST ECOLOGISTS

study the relationships between living and nonliving components of forest environments and the effects of humans on forests. They work outdoors, spending a lot of time in the field.
