Company policy on sustainability and ethical sourcing of products, if any:

Types of forestry products sold:

NAME _____ DATE _____

Certified sustainable forestry products available (under which certification scheme?):

How visible are these products? Does the company appear to be promoting them or marketing them to consumers?

In your view, does this company seem to be genuinely interested in sustainability? What evidence can you find to support this?

Would your group recommend shopping here for sustainable and certified forestry products? Why or why not?

Career Corner

WOOD SCIENTISTS

Wood is an amazing natural resource that we use for paper, construction lumber, particle board, and other products. Wood scientists study the physical, chemical, and biological properties of wood to improve the way we process it into different products.
