

## Climate Smart Forestry QUICK QUIZ ANSWER SHEET

Question	Answer	Explanation
1	TRUE	These terms are more or less interchangeable now.
2	TRUE	Managing forests and using forest products sustainably can help fight climate change by increasing sequestration of carbon.
3	FALSE	Some wood comes from forests that are sustainably managed and certified, so using this wood helps to fight climate change and provides jobs for people.
4	TRUE	A healthy forest with healthy soils can store a lot of carbon, and this helps to slow down climate change!
5	FALSE	Unfortunately, there are still many forest products on the market that are not from certified sustainably managed forests, but we're moving in the right direction with more awareness and certification!
6	D	Climate-smart forestry enhances carbon sequestration, builds healthy soils, and maintains overall forest health. Climate-smart forestry may enhance forest soil health, but more specific action and monitoring are needed to ensure that soils are well managed.
7	A	They do support livelihoods, businesses, and harvesting of trees, but the main aim is to promote sustainable forestry practices.
8	A	You can find this on the label itself, or in the description of products online. The most foolproof strategy is to look for the logo on products.
9	D	They are all true!
