

## My Local Forest & Climate Change QUICK QUIZ ANSWER SHEET

Question	Answer	Explanation
1	FALSE	Well, you can definitely have a picnic in a forest, but a forest region is a specific term used to describe the type of forest, and it's dependent on geographic location, climate and other variables.
2	TRUE	They are very important to the economy. They contribute about 25 billion dollars to the Canadian Gross Domestic Product (GDP).
3	TRUE	Climate change affects forests in different regions in different ways, depending on the tree species, the geography, climate and other factors.
4	TRUE	Climate change puts stress on trees, making them more vulnerable to pests. Plus, some pests do better in the warmer climate conditions.
5	FALSE	Unfortunately, forest fires are on the rise in Canada as a result of changing rainfall patterns, more frequent heat waves and drought conditions, and insect pests.
6	B	Only two countries have more forested area than Canada, Russia and Brazil.
7	D	Yes, climate change is a really big issue facing Canadian forests, causing increased wildfires, insect pest damage, and stress on forest species.
